Western Australia Mineral Exploration RAG Assistant

- **The Problem:** Geological WAMEX reports are massive, unstructured, and difficult to query at scale.
- **The Solution:** An AI-powered assistant that provides "grounded" answers with direct citations to original PDF sources.
- **The Benefit:** Reduces "Time to Insight" for exploration geologists from hours to seconds.

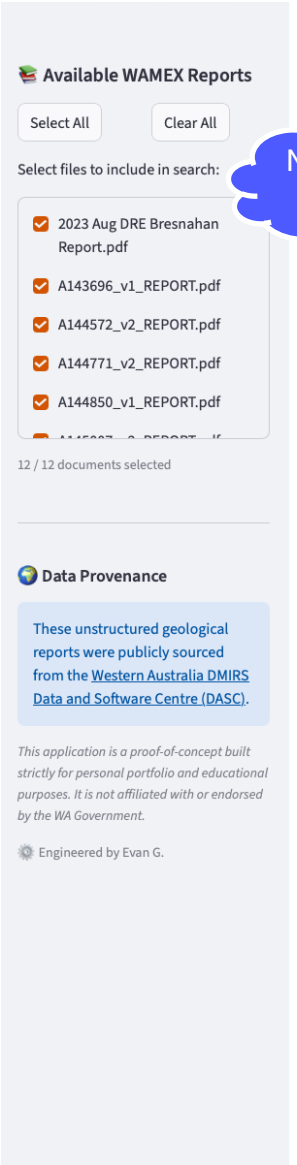
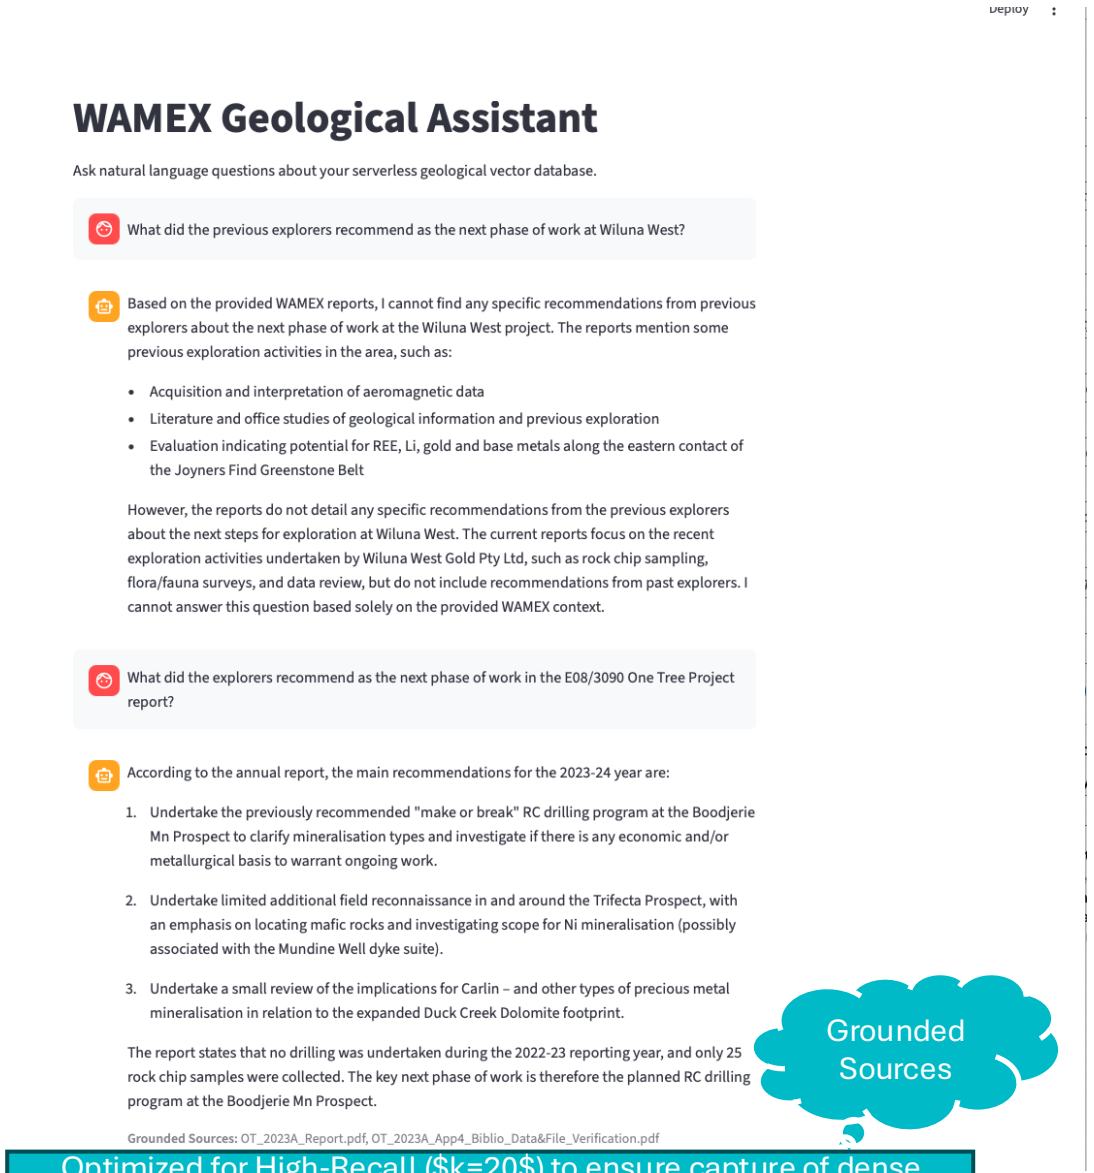
The Final UI: Grounded Geological Insights



Metadata Filtering



Grounded Sources

Optimized for High-Recall ($k=20$) to ensure capture of dense assay results across document segments.

Outcome & Results

Financial Efficiency (FinOps): Achieved a true $0.00 idle cost architecture by utilizing S3-backed FAISS instead of always-on managed vector clusters.

System Resiliency: Successfully implemented an asynchronous SQS redrive policy that self-heals from ThrottlingExceptions during high-volume ingestion.

Performance Optimization: Document processing (chunking to indexing) completes in < 5 seconds with a minimal memory footprint of ~211 MB.

Search Precision: Fine-tuned retrieval to *k=20* with a 150-token overlap to ensure high-fidelity extraction of dense geological assay data.
